

# HELPFUL CALCULATIONS & FORMULAS

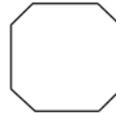

Area of a parallelogram = length  $\times$  width

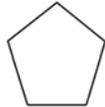

Volume of a cone = radius squared  $\times$  1.0472

Area of a hexagon (6 equal sides) = length of one side squared  $\times$  2.598

Area of octagon (8 equal sides) = length of one side squared  $\times$  4.838

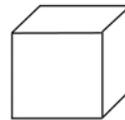

Area of a pentagon (5 equal sides) = length of one side squared  $\times$  1.720

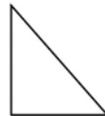

Area of trapezoid =  $\frac{(A + B) \times H}{2}$

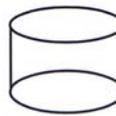

Area of other triangles = base  $\times$  height at right angle to base  $\div$  2

Volume of cube or rectangular box = length  $\times$  width  $\times$  height

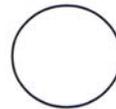

Area of a right triangle = length  $\times$  width  $\div$  2

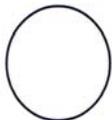

Volume of a cylinder = radius squared  $\times$  3.1416  $\times$  length of cylinder

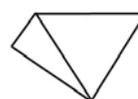

Area of a rectangle or square = length  $\times$  width

Volume of a sphere = radius cubed  $\times$  4.1888

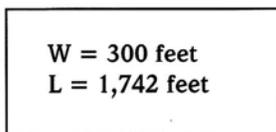

Area of a circle = radius squared  $\times$  3.1416: or diameter squared  $\times$  0.7854

Volume of a pyramid = area of base  $\times$  1/3 the height

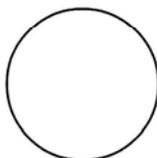

Handy Formulas: To find circumference of a circle with diameter is known, multiply diameter by 3.1416. To find diameter when circumference is known, divide circumference by 3.1416 or multiply by 0.3183.

## Estimating ACRES within a given area

$$\text{Acres} = \frac{\text{length (L)} \times \text{width (W)}}{43,560}$$

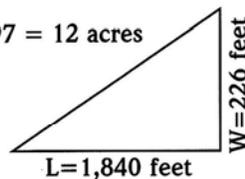

Example:  
 $1,742 \times 300 = 522,600$   
 $522,600 \div 43,560 = 11.997 = 12 \text{ acres}$

$$\text{Acres} = \frac{\pi r^2}{43,560}$$

$\pi = 3.14$   
 $r = \text{radius}$

Example:  $\frac{3.14 \times 340^2}{43,560} = 8.33 \text{ acres}$

$$\text{Acres} = \frac{1}{2} (\text{length (L)} \times \text{width (W)}) \div 43,560$$

Example:  
 $\frac{1}{2} \times 1,840 \times 226 = 208,720$   
 $208,720 \div 43,560 = 4.77 \text{ acres}$
